

COVERSWISS · SWISS HEALTH TECHNOLOGY

Clean air. Safe surfaces. *Engineered in Switzerland.*

Coverswiss is a complete Swiss range of health-protection technologies that durably eliminate viruses, bacteria, germs, and mould across both air and surfaces, from purification to contactless disinfection. Six complementary solutions, proven in laboratories and trusted by leading institutions, designed for environments where hygiene cannot be compromised: healthcare, hospitality, transport hubs, education, and high-traffic public venues.

LOD'AIR UV-C AIR-PURIFYING LUMINAIRE

A designed LED luminaire that purifies the air through germicidal UV-C while lighting the room. Operates continuously, safely, even in the presence of people.

99% of airborne viruses removed · up to 120 m² in 1 hour · P3/P4 lab tested

AIRPURE 5-STAGE AIR PURIFIER

A powerful, mobile air purifier with a five-stage filtration system including a HEPA H14 filter. Silent, autonomous, and available in three capacities.

99.995% air filtration · up to 200 m² · HEPA H14

ADIBOT AUTONOMOUS UV-C ROBOT

A UV-C disinfection robot, manual or fully autonomous, controlled by app or tablet. Destroys viruses, bacteria, and pathogens across large spaces.

Autonomous navigation · app-controlled · hospitals, hotels, transit

STERILUV UVC-LED SURFACE DEVICE

A lightweight, handheld UVC-LED device that disinfects surfaces in seconds. A mercury-free trilogy of UV wavelengths for safe, fast treatment.

2-4 sec per surface · CNRS-tested on SARS-CoV-2

COVERSAFE ANTIMICROBIAL SURFACE FILM

A transparent, biocompatible adhesive film that continuously destroys viruses, bacteria, and mould on any surface it covers — door handles, touchscreens, counters, medical equipment.

99.9% effective · lasts 4+ years · FDA / ISO 21702 / JIS Z 2801 certified

DRY-MIST CONTACTLESS AIR & SURFACE DISINFECTION

A no-touch nebulisation system that transforms a low-dose hydrogen-peroxide solution into a hyper-dry mist behaving like a gas, reaching every surface in a room. Destroys viruses, bacteria, spores, fungi and biofilms in air and on surfaces, leaving no residue. Ideal for operating theatres, pharma, agri-food, and transport.

Medical-device certified · EN & AFNOR tested · up to 1,000 m³ · traceable protocols
